

Reflection

Task 1: Test Plan

Creating a test plan was a nice thing to do, since I got the picture of what I wanted to achieve. The scope was a lead on the focus tasks, with the resource from the internet such as <https://www.guru99.com/what-everybody-ought-to-know-about-test-planing.html> was one of my references. I decided to put all the reference in my reflection since last submission was doubtful. We had done some of the test cases, so I had a clue on what to focus and all went smoothly.

Task 2: Test Cases

Creating the test cases was fun, it all went ok.

Task 3: Unit Test:

I had to test view list of books and delete a book, all went well. I didn't not do the part where I should create a fail test yet.

Task 3: Api Test

All went as planned, after a little researcher few error on the importing part. I attach my results and also more references.
